WHAT IS CLAIMED IS:

1. A teaching mat comprising:

a plurality of parts and each part having notches and protrusions on each side thereof, a first hole defined through a center of each part and a sound generating member received in the first hole, at least one second hole defined in each part and located beside a designation member on the part, a circuit board received in the at least one second hole and electrically connected to the sound generating member, a conductive spring piece located in the at least one second hole and a gap defined between the circuit board and a main body of the conductive spring piece, a button engaged with the at least one second hole so that the conductive spring piece is lowered to touch the circuit board to generate sound from the sound generating member by pushing the button.

2. The mat as claimed in claim 1 further comprising a base piece engaged with the first hole and a space defined in the base piece so that the sound generating member is engaged with the space.

3. The mat as claimed in claim 1, wherein the circuit board is engaged in a ring which is engaged with a circuit member which is securely engaged with the at least one second hole.

4. The mat as claimed in claim 1 further comprising a third hole defined in each part and the designation member engaged with the third hole.

5. The mat as claimed in claim 1 further comprising a bottom plate adhered to a bottom of each part and covering the first hole and the at least one second hole.
